

Amendments to the Claims:

This listing of claims replaces all prior versions and listings of claims in the application:

Listing of Claims:

1. (Currently Amended) A handle for a shaving razor, the handle comprising:
a handle casing; and
an interconnect assembly disposed at an end of the handle casing, said
interconnect assembly being configured to releasably connect a cartridge to the handle, and
including a release button comprising a button substrate and a flexible canopy, comprising an
elastomer, extending outwardly from the button substrate toward the handle casing;
the flexible canopy being constructed so that a free edge of the flexible canopy contacts a
wall formed by the handle casing when the release button is in an unloaded position, and the
flexible canopy buckles when the button substrate is moved towards the cartridge as a user
actuates the release button, causing the free end to move along the wall.

2. (Cancelled)

3. (Currently Amended) The handle of claim [[2]] 1, wherein the flexible canopy is
constructed to recover, after buckling, toward an original, unloaded position.

4-6. (Cancelled)

7. (Currently Amended) The handle of claim [[5]] 1, wherein a contact angle
between an outer surface of the canopy and the wall is no greater than about 110 degrees.

8. (Currently Amended) The handle of claim [[5]] 1, wherein a contact angle
between an outer surface of the canopy and the wall varies along a periphery of the canopy.

9. (Original) The handle of claim 8, wherein the contact angle varies from about 110 degrees to about 50 degrees.

10. (Original) The handle of claim 8, wherein a maximum contact angle between the outer surface of the canopy and the wall is at a center region of the canopy.

11. (Cancelled)

12. (Original) The handle of claim 1, wherein the canopy comprises a thermoplastic elastomer.

13. (Currently Amended) A shaving razor comprising:
a cartridge comprising a blade unit and connecting member pivotally connected to the blade unit, the blade unit including a housing that carries one or more shaving blades; and
a handle releasably connected to the cartridge, the handle including a release button comprising a button substrate and a flexible canopy, comprising an elastomer, extending outwardly from the button substrate;
the flexible canopy being constructed so that a free edge of the flexible canopy contacts a wall formed by the handle casing when the release button is in an unloaded position, and the flexible canopy buckles when the button substrate is moved towards the cartridge as a user actuates the release button, causing the free end to move along the wall.

14. (Cancelled)

15. (Currently Amended) The shaving razor of claim ~~[[14]]~~ 13, wherein the flexible canopy is constructed to recover, after buckling, toward an original, unloaded position.

16-17. (Cancelled)

18. (Currently Amended) The shaving razor of claim ~~[[17]]~~ 13, wherein a contact angle between an outer surface of the canopy and the wall is no greater than about 110 degrees.

19. (Currently Amended) The shaving razor of claim ~~[[17]]~~ 13, wherein a contact angle between an outer surface of the canopy and the wall varies along a periphery of the canopy,

20. (Original) The shaving razor of claim 19, wherein the contact angle varies from about 110 degrees to about 50 degrees.

21. (Original) The shaving razor of claim 19, wherein a maximum contact angle between the outer surface of the canopy and the wall is at a center region of the canopy.

22-23. (Cancelled)

24. (Original) The shaving razor of claim 13, wherein the canopy comprises a thermoplastic elastomer.

25. (New) The handle of claim 1 wherein the canopy has a thickness between about 0.3 mm and about 0.6 mm.

26. (New) The shaving razor of claim 13 wherein the canopy has a thickness between about 0.3 mm and about 0.6 mm.
